Topic 04 – Data privacy in everyday life . . . 2
Topic 05 – Prompt basics . . . 2
Topic 08 – Hallucinations & fact-checking . . . 2
Topic 12 – Prompt injection . . . 3
Counting your points . . . 3
What to review if you got something wrong . . . 3

Solutions: Quick test: quick start (topics 01, 02, 03, 04, 05, 08, 12)

Pass mark 75 %: 15 out of 20 points Only look here once you have finished the test. You grade practical tasks and safety checks yourself using the self-assessment rubric (`self_assessment`).

Topic 01 – What is AI?

Cheatsheet: `01_cheatsheets/01_what_is_ai`

Question 1 – B (1 pt): An LLM predicts the next piece of text based on patterns — it is not a fact database (A), not a search engine (C) and not a truth program (D).

Question 2 – True (1 pt): Convincing wording says nothing about correctness — AI answers can be wrong (hallucinations), so you always double-check important things.

Topic 02 – Tokens & context window

Cheatsheet: `01_cheatsheets/02_tokens_context`

Question 3 – B (1 pt): The context window is the working memory per chat; in long conversations, early details get “lost” (“context junk”, lost details in the middle). A, C and D describe invented mechanisms.

Question 4 – B (1 pt): Summarizing and continuing in a new chat keeps the context small and the quality high. Carrying on (A) makes it worse, restarting without a note (C) throws away work, capital letters (D) change nothing.

Topic 03 – Model selection & free plans

Cheatsheet: `01_cheatsheets/03_model_selection`

Question 5 – B (1 pt): The rule of thumb: match the model to the task. Always using the largest model (A) wastes limit/cost, always the smallest (C) costs quality on tricky tasks, and D ignores that the model does play a role.

Question 6 – False (1 pt): Providers change model names, features and limits frequently. Rely on the provider's current page, not on outdated information.

Topic 04 – Data privacy in everyday life

Cheatsheet: `01_cheatsheets/04_data_privacy_everyday`

Question 7 – A, B, D, E (2 pts): No passwords/keys (A), no other people's health data (B), no bank/ID data (D), no confidential company and customer data (E). Fictional examples with "Person A" (C) are exactly the safe way.

Question 8 – B (1 pt): Anonymize (replace names, places, license plates) plus check the privacy settings. Uploading unprotected (A), extra data (C) and sending to multiple services (D) all increase the risk.

Topic 05 – Prompt basics

Cheatsheet: `01_cheatsheets/05_prompt_basics`

Question 9 – B (1 pt): Goal, context, target audience, tone, length and reason are all stated concretely. A and D are vague, C is unstructured.

Question 10 – Model answer (2 pts):

```
Step 1: Summarize the following text in five bullet points.
Target audience: readers with no specialist knowledge.
Step 2: At most 5 bullet points, no evaluation. If a key piece of
information is missing, mark it with [OPEN] instead of making it up.
```

(a) 1 pt: target audience and format stated.
(b) 1 pt: constraint (e.g., length) plus a rule against making things up ([OPEN] marker or "add nothing").

Topic 08 – Hallucinations & fact-checking

Cheatsheet: `01_cheatsheets/08_hallucinations`

Question 11 – C (1 pt): Search for and check sources yourself. Precise-sounding details (A) prove nothing, "Are you sure?" (B) is no proof, and checking only the year (D) is not enough.

Question 12 – True (1 pt): Rule of thumb: the more consequential (health, legal, financial, publication), the more thorough the checking — up to and including specialists and original sources.

Topic 12 – Prompt injection

Cheatsheet: `01_cheatsheets/12_prompt_injection`

Question 13 – B (1 pt): Indirect injection hides in content that the AI processes. A is direct, C is hallucinations (topic 08), D is a context issue (topic 02).

Question 14 – Model answer (2 pts): (a) 1 pt for two warning signs, e.g.: unknown link, demand to "pay right away", behavior that doesn't match the task, unusual urgency. (b) 1 pt: don't click, don't pay; stop the chat; check accesses and revoke them if needed; document and report the incident (IT/responsible person). Two concrete steps are enough.

Question 15 – True (1 pt): Actions with consequences always need your approval. Technical safeguards (filters, guardrails) help, but they do not replace the confirmation — there is no complete technical protection.

Counting your points

Topic	Questions	Possible points	My points
01 What is AI?	1–2	2	
02 Tokens & context window	3–4	2	
03 Model selection & free plans	5–6	2	
04 Data privacy in everyday life	7–8	3	
05 Prompt basics	9–10	3	
08 Hallucinations & fact-checking	11–12	2	
12 Prompt injection	13–15	4	
Total		**20**	

Passed: 15 points or more.

What to review if you got something wrong

- **Wrong on questions 1–2:** Topic 01 *What is AI?* and extra exercises 01
- **Wrong on questions 3–4:** Topic 02 *Tokens & context window* and extra exercises 02
- **Wrong on questions 5–6:** Topic 03 *Model selection & free plans* and extra exercises 03
- **Wrong on questions 7–8:** Topic 04 *Data privacy in everyday life* and extra exercises 04
- **Wrong on questions 9–10:** Topic 05 *Prompt basics* and extra exercises 05
- **Wrong on questions 11–12:** Topic 08 *Hallucinations & fact-checking* and extra exercises 08
- **Wrong on questions 13–15:** Topic 12 *Prompt injection* and extra exercises 12

Not passed? Review the topics with the most mistakes and retake the test afterwards.
